

NEWS ABOUT THE PROJECT

PROMET-H2 Online Workshop

The PROMET-H2 project aims to develop new technologies that will improve the processes of energy transmission to hydrogen, as well as its cost and storage. It is based on hydrogen as a solution for the storage of electricity produced with renewable energies, as these depend on highly variable climatic conditions. On 9th of June we will hold the next online workshop related to novel materials for energy storage. Find out more about the agenda and register by the 5th of June.
